## HOW MANY PET BOTTLES DOES IT TAKE TO MAKE A TONO SHELL?

The TONO felt shell is made of 100% recycled PET bottles.  
How many bottles do you think it takes to make  
one TONO felt shell?

Please feel free to ask –  
the answer might surprise you.

## TONO BY RANDERS+RADIUS

The new arm chair TONO launched by Randers+Radius is one of the first chairs on the market which is made of environmental friendly materials and at the same time is a sound absorbing chair with a shell made of felt from 100% recycled PET bottles.

After many tests and alterations a method had been defined which made it possible to weld a piece of fabric on the inner part of the shell. This gives the chair a formal interplay between the light and elegant frame and the soft upholstery.

The seat shell is flexible and designed for high comfort. This has been achieved by further developing the unique double curved back of the SALA chair. With its characteristic seat shell and comfortable armrests, the Danish Design Company Hans Thyge & Co, has managed to design a functional chair with a both timeless and beautiful shape.

The transformation from design to actual chair has taken more than a year and the shell has gone through many alterations and improvements in order to transform it into the molded felt shape it has today. During this period of time 3 different types of frames have been developed which gives the chair three completely different looks and makes it a very versatile chair suited for many different purposes and environments.

A VERSATILE CHAIR  
SUITED FOR MANY  
DIFFERENT PURPOSES  
AND ENVIRONMENTS

**Design,  
interior,  
graphics &  
architecture**

**“Multidisciplinary work is the key to understand how architecture, rooms, objects and graphics can contain the same stories.”**

Hans Thyge & Co has 25 years of activity internationally and last year they opened up a branch of the studio in Shanghai to serve their many Asian clients.

Design is more and more about developing entire concepts for companies, where all elements around the products communicate the same.

“A chair is one of the strongest and most complex pieces of design, because a chair physically relates to the human body. The chair grabs and holds our body and therefore an intimate communication is made.

This connection involves and activates all our senses and therefore the chair is the ultimate sculpture within furniture”.
